

THE CHALLENGE

The battle with COVID-19 has just begun. With more than 3 million people infected around the world, experts have discovered the virus is easily transmitted by touching contaminated surfaces, where the virus can remain for long periods of time. This makes Disinfectant Spraying **CRITICAL** for public safety.

As businesses and schools begin to open their doors, they **MUST** have the ability to disinfect large open spaces, such as auditoriums, factory floors, or sports stadiums.

Forward thinkers across the globe are now deploying drones in the effort to contain the spread of the pandemic. From distributing voice messages to those not following social distancing measures to delivering medical samples, drones have become a versatile tool for managing this health catastrophe.

THE SOLUTION

At Argos, we are utilizing specialized drones, already effective for spraying liquids on crops, to **SAFELY & QUICKLY** spray EPA approved disinfectant chemicals in large open spaces to help protect the public.

When coupled with CDC cleaning recommendations, disinfectant spraying mitigates the risk of exposure to harmful viruses, such as COVID-19.

Our Drone Disinfectant Solution is:

- **SAFE** – All Disinfectant Solutions are classified as non-hazardous
- **ENVIRONMENTAL FRIENDLY** – All Disinfectant Solutions are EPA approved
- **EFFECTIVE** – Disinfectant Solution is approved by the EPA for effectiveness against viruses
- **EFFICIENT** – Able to spray arenas and stadiums in a fraction of the time vs traditional methods
- **SUSTAINABLE** – Provides an affordable solution for regular disinfection
